

SUMMARY

Results-driven **Full-Stack Engineer** with strong experience in building scalable **REST APIs**, **LLM-powered systems**, and **AI-driven applications**. Proven ability to design backend architectures, integrate **Google Gemini SDK**, and develop end-to-end solutions using modern JavaScript frameworks. Experienced in translating complex business problems into reliable, high-performance software systems.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, SQL, HTML/CSS, PHP
Frameworks/Libraries: React, Node.js, Express.js, Next.js
Databases: MongoDB, MySQL
Tools & Technologies: Git, **REST APIs**, **Gemini SDK**, **LLMs**, GitHub

PROJECTS

Doctor — GenAI <i>Node.js, Express.js, React, MongoDB, Gemini (Google) SDK, JavaScript</i> - Integrated Google Gemini SDK for intelligent PDF analysis using LLMs - Developed core AI pipelines including PDF parsing and semantic analysis - Built a dynamic prototype dashboard using Next.js and TypeScript - Designed and deployed backend services for LLM-powered REST APIs - Created an interactive dashboard enabling AI utilities and agent-based workflows	 Live 2025
Donor Management System <i>Node.js, Express.js, React, MongoDB</i> - Designed and implemented scalable REST APIs for the platform - Built real-time certificate generation with download support - Implemented search, sorting, and pagination, reducing data fetch time by 28% - Engineered backend services using Express.js with optimized database schemas	 Live 2024
Backend RESTful API <i>Node.js, Express.js, MongoDB, React</i> - Developed a backend system following RESTful architecture - Implemented file uploads, pagination, search, and filtering - Built complete CRUD operations using Node.js and MongoDB	 Live 2024
Amazon Ecommerce Clone <i>React, HTML, CSS, JavaScript</i> - Frontend-focused ecommerce project emphasizing component-based architecture - Developed Add-to-Cart, product sorting, and listing workflows - Built reusable React components for scalable UI development - Integrated external Ecommerce APIs	 Live 2023
Nawnit Studio Prints <i>Node.js, Express.js, React, MongoDB, MySQL, PHP</i> - Developed a full-stack ecommerce platform for custom print services - Implemented payment gateway integration and order management system - Built admin dashboard for inventory and order tracking - Designed database architecture using MongoDB and MySQL	 Live 2023

EDUCATION

Poornima University <i>Bachelor of Technology in Computer Science</i>	Jaipur, Rajasthan <i>Present</i>
---	-------------------------------------

ACHIEVEMENTS

Startup Success - Scaled a startup to 300+ active users by developing scalable full-stack architectures - Resolved critical technical bottlenecks, improving system performance by 40% - Implemented a structured user feedback system, increasing user retention by 35%	2024
